

**LCF Technologies** was born to answer the need to contain contaminated liquids generated by chemical products produced during emergencies situations. These polluted liquids can be produced mainly by accidental spills, contaminated waters formed when extinguishing fires or simply by sporadic cleaning carried out in industrial establishments. Thanks to our products, industrial companies can prevent and avoid incidents and impacts on the environment and/or the community.

The purpose of the organization revolves around these fundamental pillars: **environmental protection** and **pollution prevention, continuous improvement and constant innovation** of our products and services thanks to the commitment of all workers, **the protection of people and property** by providing **safe and healthy working conditions**, the integration of **sustainability** into our strategies and operations through efficient resource use and **waste and emissions reduction**, and the promotion of **corporate social responsibility** by acting ethically and transparently and promoting equality, diversity, and inclusion.

At **LCF Technologies** we have developed and maintain an **integrated management system** based on compliance with the following commitments:

- **Satisfying the needs of our customers and other stakeholders** by manufacturing and designing products and giving services of extreme quality, establishing internal and external communication based on transparency, assuring a good working environment. As a result, we are able to guarantee low environmental impacts while promoting sustainable practices.
- **Foster the participation and involvement of employees** by establishing effective communication channels through the committee of security and environment, fostering a culture of social responsibility.
- **Complying with the legal requirements** applicable and other requirements subscribed by the firm or alternative standards required by other stakeholders or groups of interest.
- **Identify environmental impacts** that are result of the development of our activity by promoting the conservation of our environment through the prevention, control and elimination of our most significant environmental waste, and promoting efficient use of natural resources.

- **Identify and analyze all the environmental issues such as impacts** related to our activity from the perspective of life cycle. To articulate this compromise, we carefully monitor and try to reduce the impacts associated to our suppliers, activity and even our customers. The aim of these actions is to assure a proper management of the products at the end of their lifetime by facilitating all the required information.
- **Have the necessary resources** for the development and implementation of the management system and thus continuously improve its effectiveness. Therefore, we are focused on the optimization of our manufacturing process such as reducing the use of raw materials and applying innovative technique and promote sustainable innovation.
- **Establish annual goals** in accordance with the context and strategy of the organization.
- **Eliminate the dangers and reduce the risks** for safety and health at work.
- **Care for our workers** in every way, so that they have the safest and healthy working conditions for the prevention of injuries and the deterioration of health at work. Moreover, we aim to facilitate consultation and participation in the relevant issues that affect them.
- **Reducing our carbon footprint**, implementing measures to decrease our greenhouse gas emissions, and promoting the use of renewable energies and clean technologies in our operations.
- **Integrate sustainability** into all our operational and management processes, continuously seeking to reduce our environmental impact and contribute to long-term sustainable development.

From the **LCF Technologies Management** we ensure that this policy is distributed and understood by all the staff of the organization, as well as being available to any interested party related to the organization through our web page ([www.lcftech.es](http://www.lcftech.es)).
